

IN THE CLAIMS:

1. **(Currently amended)** Suspension means (1,10) for a transducer, where the suspension means (1,10) also functions as a sound-guide for directing sound between the transducer and ~~the~~an external cabinet of an audio processing device, ~~where~~wherein the suspension means (1,10) is shaped as a tube which has means for forming a connection with ~~the~~an inlet/outlet of the transducer at a first end and means for forming a connection with ~~the cabinet~~a wall (15) of the cabinet of the audio processing device at a second end in order to guide sound through the tube, where ~~the~~an intermediate part of the tube in ~~the~~a length direction has alternating wide and narrow parts.

2. **(Currently amended)** Suspension means as claimed in claim 1, where the wide and narrow parts are shaped as circumferentially extending bellows.

3. **(Currently amended)** Suspension means as claimed in claim 1 ~~or claim 2~~, whereby ~~the~~wherein a circumference of the tube is oval shaped.

4. **(Currently amended)** Suspension means as claimed in ~~one of the above claims~~ having claim 1, including at least two consecutive sections, each comprising a wide and a narrow part, where the consecutive sections are shaped to have unlike resonance frequencies.
